OUR STORY!

From Prcatice!

More than 15 years back, when I started my career journey in the pharma industry. I started as a medical representative, which is the normal starting point. The job I always hate, not only because of the physical effort and the stress of achieving the target but also because of my personality and attitude. I'm not a salesperson.

Since I stepped into the pharma industry and I was keeping my eyes on other opportunities there, I came across the marketing, medical affairs, regulatory, and pharmacovigilance, then I focused my eyes on the last 2, which are actually related to each other.

So I started to plan for myself, how to go there? I started to look for courses, workshops, and training to equip myself with the tools that make me ready for that position. I gained the knowledge and went further to travel for conferences abroad, which I used to pay for it by myself.

My manager used to tell me why I'm wasting my time and money on conferences that are not related to my current job?????!!!

He did not have my vision, and he does not have to actually!

It is my vision, my goal, my journey

After this stage, I got a position as a regulatory affairs manager in a small city, so I had to move there, I was thinking that I have been ready for this job with my knowledge.

BUT A SURPRISE POPPED UP

It revealed that knowledge alone is not enough, and I'm missing a great thing, which is "Practice".

GUESS WHAT?

So I realized that I had to think out of the box, I started to approach the professionals via e-mail and asked them to teach me their experiences from practice and I will pay them per hour

I did this for 2 years.

From here I came up with my dream project "The Pharma Academy" which "Comes to you from practice"

The Pharma Academy offers you 33 courses all from practice

With the pharma academy, you will be the master of both pharmaceutical products and medical devices in each and every country in the META region, the high potential market, in addition to the global markets of the UK, USA, Europe, and Canada.

With the Pharma Academy, you will experience the actual regulatory and pharmacovigilance, you will go through the process step by step, prepare the actual forms, and see the actual certificates.

After finishing any of the pharma academy courses, you can go and apply what you have learned straightaway.

What you will be expert of with the Pharma Academy?

The regulatory function in healthcare industries is vital in making safe and effective healthcare products available worldwide. Individuals who ensure regulatory compliance and prepare submissions, as well as those whose main job function is clinical affairs or quality assurance are all considered regulatory professionals.

The most significant responsibility of a Regulatory professional in an export company is to get a product successfully registered and approved by the Health Agency of the country like FDA for USA or EMA for Europe.

Regulatory professionals are employed in industry, government, and academia and are involved with a wide range of products, including:

pharmaceuticals

medical devices

in vitro diagnostics

biologics and biotechnology

nutritional products

cosmetics

veterinary products

What you will be expert of with the Pharma Academy?

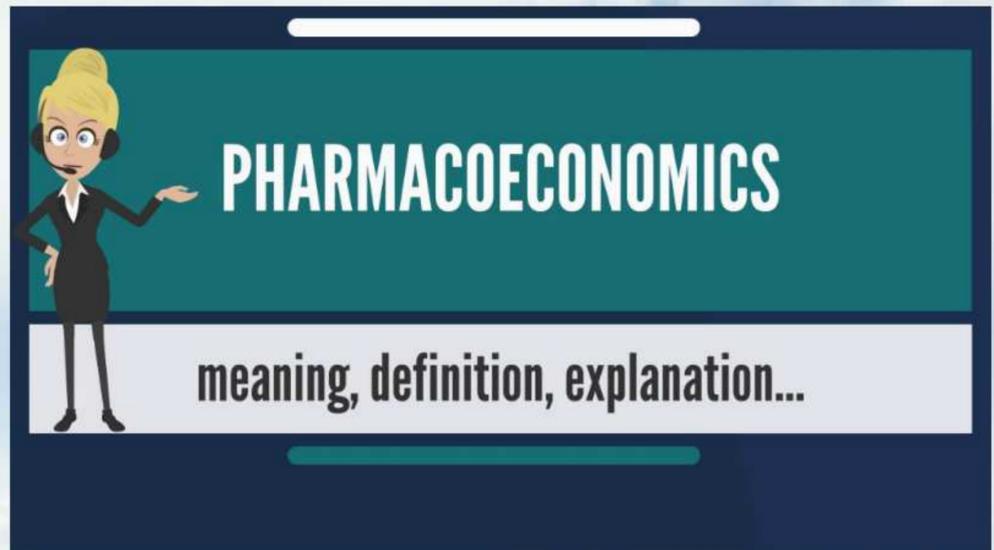

Pharmacovigilance (PV, or PhV), also known as drug safety, is the pharmaceutical science relating to the collection, detection, assessment, monitoring, and prevention of adverse effects with pharmaceutical products

The word "pharmacovigilance" are pharmakon (Greek for drug) and vigilare (Latin for to keep watch). As such, pharmacovigilance heavily focuses on adverse drug reactions (ADR), which are defined as any response to a drug that is noxious and unintended, including lack of efficacy (the condition that this definition only applies with the doses normally used for prophylaxis, diagnosis or therapy of disease, or for the modification of physiological disorder function was excluded with the latest amendment of the applicable legislation).

Medication errors such as overdose, misuse, and abuse of a drug as well as drug exposure during pregnancy and breastfeeding, are also of interest, even without an adverse event, because they may result in an adverse drug reaction.

Information received from patients and healthcare providers via pharmacovigilance agreements, as well as other sources such as the medical literature, plays a critical role in providing the data necessary for pharmacovigilance to take place.

*What you will be expert of
with the Pharma Academy?*

Pharmacoeconomics refers to the scientific discipline that compares the value of one pharmaceutical drug or drug therapy to another

It is a sub-discipline of health economics

A pharmacoeconomic study evaluates the cost (expressed in monetary terms) and effects (expressed in terms of monetary value, efficacy, or enhanced quality of life) of a pharmaceutical product.

Pharmacoeconomic studies serve to guide optimal healthcare resource allocation, in a standardized and scientifically grounded manner.

In 1993, Australia became the first nation to use pharmacoeconomic analysis as part of the process of deciding whether new drugs should be subsidized by the Federal Government. The Pharmaceutical Benefits Advisory Committee (PBAC) advises Federal Government ministers on whether new drugs should be placed on a list for of drugs that consumers can then purchase from pharmacies at a subsidized price.

Since 1993, this approach to evaluating costs and benefits is used in Canada, Finland, New Zealand, Norway, Sweden, and the UK.
